Occasionally, laptop keyboards need to be replaced. Here you'll find just how easy that can be.

## Step 1 — Keyboard

- Before removing the keyboard, turn off the computer and open it.

## Step 2

- Use a spudger to gently pry out the keyboard.
  - ⚠ When working with electronics, it's important to choose a tool that's ESD-safe to avoid accidental damage to the device. The metal spudger is great when you need serious prying power, but a regular black nylon spudger should be used whenever possible.
- There are small metal tabs holding it in place beneath the bezel. Using your tool, you should be able to easily pop the keyboard out.

## Step 3

- Once the keyboard is removed, you may have to remove the connecting ribbon cable, but it easily pulls out.

To reassemble your device, follow these instructions in reverse order.
